Guidelines for Water Use in Food Facilities

- Before using tap water for drinking, water fountains, or cooking, run the tap on cold for one to two minutes.

- Never use hot water for drinking or cooking.

- Any patrons that are children 5 years of age or younger or pregnant women should use filtered (NSF53 certified filter) water if available. If filtered water is not available, they should drink bottled water.

- If you have employees who are pregnant, they should use filtered (NSF53 certified filter) water if available. If filtered water is not available, they should drink bottled water.

- You should ensure that any points where employees or patrons have access to public drinking water are flushed before first consumption each day.

- If your ice machines, drink dispensers, etc. have filtration, make sure those filters are maintained and changed in accordance with the manufacturer’s recommendations.

- If your ice machines, drink dispensers, etc. do not have filtration and you would like to purchase the appropriate type, please visit http://info.nsf.org/Certified/DWTU/.

- If you are still concerned about lead levels, contact the Mississippi State Department of Health’s Public Health Laboratory to order a lead sampling kit at 601.576.7582. The cost is $15 for Jackson customers.
