STATE OF MISSISSIPPI PUBLIC WATER SYSTEMS CAPACITY DEVELOPMENT PROGRAM

TRIENNIAL REPORT TO THE GOVERNOR

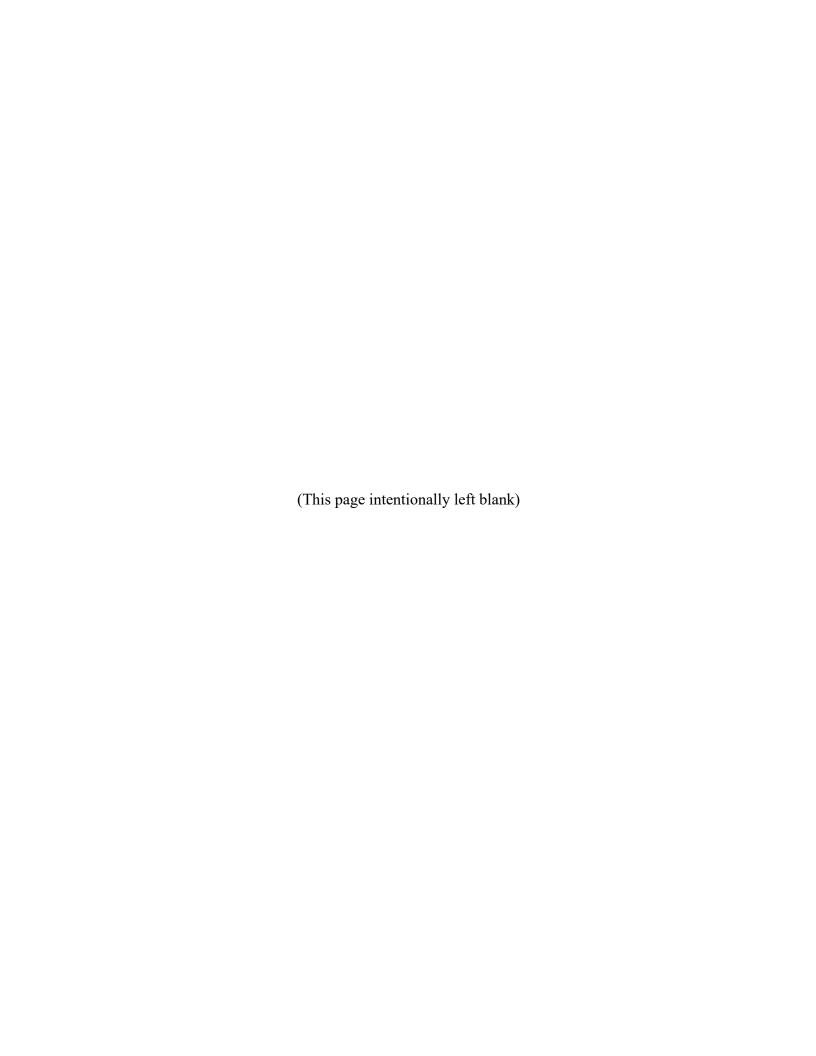

Submitted To

Governor Tate Reeves

By

Mississippi State Department of Health Office of Health Protection Bureau of Public Water Supply

October 2020

State of Mississippi Public Water Systems Capacity Development Program Triennial Report to the Governor

Mississippi State Department of Health Office of Health Protection Bureau of Public Water Supply

INTRODUCTION

The Federal Safe Drinking Water Act Amendment of 1996 (SDWA) established the national Drinking Water State Revolving Fund (DWSRF) Program. The program allows the Environmental Protection Agency (EPA) to make capitalization grants to states who in turn provide low cost loans to public water systems which helps them to achieve or maintain compliance with SDWA requirements. Accordingly, the State Legislature in the 1995 Regular Session (through Section 41-3-16, MS Code of 1972 Annotated) created what is now called the Drinking Water Systems Improvements Revolving Loan Fund (DWSIRLF) Program, to receive the federal DWSRF capitalization grants from EPA. The Program then provides low cost loans to the public water systems to finance needed infrastructure improvements.

As a condition of receiving the DWSRF capitalization grants, the SDWA requires each state to implement a "Capacity Development Program" to improve the technical, managerial, and financial capacity of the state's existing public water systems and to prevent the creation of new public water systems that do not have the capacity to comply with current and future provisions of the SDWA. This report describes Mississippi's Capacity Development Program and outlines the implementation results since the last report to the Governor in 2017. Submission of this report represents a reporting milestone required by EPA to avoid withholdings of the 2021 DWSRF capitalization grant.

NEW PUBLIC WATER SYSTEMS' CAPACITY DEVELOPMENT

To comply with the capacity development requirements of the SDWA for new systems, the State Legislature enacted the Mississippi Safe Drinking Water Act (Section 41-26-8, MS Code of 1972 Annotated) to require that all new public water systems be approved by the Mississippi State Department of Health (MSDH) prior to beginning construction. During the review/approval process, MSDH is required to ensure that each proposed new system has the technical and operational capacity to comply with all SDWA requirements. This process is effectively the Program's first "control point," or point at which the State can exercise authority to ensure the demonstration of a newly proposed system's capacity to serve its customers from the *technical* side. Another control point created by the State Law's revision is the requirement that, prior to approving a new public water system, MSDH must have written certification from the Executive Director of Mississippi's Public Utilities staff that the new water system has the *managerial* and *financial* capacity to comply with all SDWA requirements. There have been no changes in the State's legal authority or control points since the inception of the Capacity Development Program.

EXISTING PUBLIC WATER SYSTEMS' CAPACITY DEVELOPMENT

Implementation of a capacity development program for existing public water systems is a much more difficult task than it is for new public water systems. The State of Mississippi has 1,179 public water systems that are subject to the requirements of the SDWA. Since Mississippi is a rural state, the vast majority of these systems are small with limited financial resources. It is therefore impossible to develop a mandatory program in the State that would solely force all these small systems to immediately make the necessary capital improvements to achieve the technical, managerial, and financial capacity needed to comply with the SDWA. Additional requirements to the SDWA, such as the Ground Water Rule, have required small systems to make necessary improvements or consolidate their system with other surrounding systems. Regardless, the method implemented by MSDH consists primarily of two components: 1) stringent enforcement of existing laws and regulations, and 2) implementation of a capacity assessment rating system and technical assistance procedures.

ENFORCEMENT - MSDH stringently enforces the water supply laws and regulations, such as those related to: 1) SDWA water quality standards, 2) waterworks operator certification, 3) overloaded water systems, 4) corrosion control treatment facilities, 5) cross-connection control, and 6) water system board member training. By strictly enforcing these laws and regulations, MSDH helps ensure that a safe supply of drinking water is provided. Strict enforcement also encourages water systems without adequate capacity to seek alternate methods of compliance, including the pursuit of mergers with neighboring viable water systems. In most cases, these mergers (or "consolidations") result in the creation of much more viable public water systems in the capacity assessment categories. Furthermore, recent Congressional action has given states additional support to force water system consolidation where compliance problems are evident in the management of the system.

CAPACITY ASSESSMENT - MSDH has developed a Capacity Assessment Rating Program to rate the capacity of existing systems. The technical, managerial, and financial capacity of each public water system is rated annually during inspections conducted by MSDH regional engineering staff. The maximum rating possible is "5.0", and a rating of "0.0" is the minimum. The rating is determined using Capacity Assessment Forms (CAFs), which consist of three major sections: 1) Technical, 2) Managerial, and 3) Financial. Each section includes key questions designed to identify those tasks that a public water system must routinely accomplish in order to demonstrate their capacity to comply with all current and proposed requirements of the SDWA and Mississippi's Safe Drinking Water Act.

The CAFs are developed by MSDH in conjunction with an Advisory Committee consisting of representatives of stakeholder organizations such as the Mississippi Rural Water Association; the Mississippi Municipal League; the Mississippi Water & Pollution Control Operators' Association; Communities Unlimited, Inc. (CU); Mississippi Board of Supervisors; Mississippi Development Authority; Public Service Commission, etc., as well as selected water system managers and operators from throughout the State. Each year, prior to the annual Advisory Committee meeting (typically held in the last quarter of the state fiscal year), MSDH staff reviews and evaluates the program, discusses the strengths, weaknesses, and any related problems which may have arisen during the fiscal year. The staff then recommends changes to be considered by the Advisory Committee. Later at the Advisory Committee meeting, the recommended changes are presented for their review and comment. Additional suggestions may be offered during the course of the meeting beyond initial staff recommendations. At the conclusion

of the meeting, MSDH, using the Advisory Committee's suggestions, commonly will make changes as needed to the Program's strategy for the following year's CAFs. Unfortunately, due to complications associated with the ongoing pandemic, the Advisory Committee was unable to meet at its April 2020 meeting. Internally, the Bureau elected to maintain the current structure of the program through fiscal year 2021. Furthermore, it is the Bureau's intention to continue to move forward with the encouragement of the concepts of water audits and asset management. At the 2019 Advisory Committee meeting, incorporation of water audits and asset management into the capacity assessment structure was strongly pushed, but the committee wanted to ensure that ample time was given to the state's public water systems in the form of training and documentation to aid them in them in preparation of these important operation and maintenance documents. That discussion led to a postponement of implementation for a year and with the complications of the pandemic, water systems will now get an additional year to prepare.

Appendix A contains copies of the three CAFs used during SFY-2020. Included are the: 1) Standard Form – used for community public water systems; 2) Private Form – used for public water systems that are owned by private investors; and 3) Non-Transient Non-Community Form – used for public water systems that provide water to 25 or more of the same individuals, in a non-residential manner, on a daily basis (schools, industries, etc.). At this time a capacity assessment for systems meeting the definition of a Transient Non-Community public water supply is not required or performed.

TECHNICAL ASSISTANCE – One of the major advantages of the MSDH Capacity Assessment Rating is its ability to aid the department in identifying public water systems that are at risk of becoming unable to provide safe adequate drinking water to their customers. Once systems are shown to have low capacity, efforts are made to provide assistance, within the limits of funding, to improve the systems through grants from the EPA, the Drinking Water Systems Improvements Revolving Loan Fund (DWSIRLF) Program funds, the Small System Technical Assistance Set-Aside, and the State Program Management Set-Aside. DWSIRLF technical assistance providers and the Bureau of Public Water Supply Staff provide the assistance at no cost to at-risk water systems.

Technical assistance can take several forms which allow the water system recipients options to improve their technical, financial, and managerial capabilities. The EPA Capitalization Grant set-asides have provided MSDH the ability to contract with technical assistance providers such as Communities Unlimited, Inc. (CU), Mississippi Rural Water Association (MsRWA), and the Mississippi State University Extension Service (MSU-ES). The technical assistance providers are able to provide specialized assistance beyond what the MSDH Bureau of Public Water Supply staff can provide. The assistance includes: 1) Comprehensive and Intermediate Technical Assistance provided by Communities Unlimited (SFY-2018), MSU-ES (SFY-2019 & SFY-2020); 2) PEER Review Program provided by MSU-ES (SFY-2018), MsRWA (SFY-19 & SFY-2020); 3) Board Management Training Coordination provided by MSU-ES; 4) Hands-On Operator Training provided by MsRWA and 5) Asset Management provided by MsRWA. These programs have a direct or indirect impact on a system's ability to obtain or remain in compliance with the SDWA.

Annually, MSDH determines which public water systems are in the most need of assistance. Based on the previous year's capacity assessment scores and SDWA violations, the technical assistance contractors are provided a list of systems to contact to offer assistance. Periodic reports are provided by the contractors to MSDH to confirm that the assistance being provided is benefitting the public water supplies of Mississippi.

The comprehensive and intermediate technical assistance provided through Communities Unlimited and MSU-ES allows the water system officials and staff to receive one-on-one assistance to improve their overall capacity ratings. This type of technical assistance is not voluntary since MSDH provides a list of the poorest performing systems. The water systems receive a letter notifying them of their selection for technical assistance. Refusing the assistance may affect future compliance actions taken on that system, if warranted, by the Compliance and Enforcement Branch of MSDH. The assistance provided is specific and specialized, based on the water supply's needs. It could take the form of obtaining new management policies, financial budgeting, or operational improvements. MSDH Regional Engineering staff may recommend additional water systems for assistance that they deem are in need of technical assistance. CRG and MSU-ES perform assessments of systems by meeting with the officials and operators. After an assessment is completed a specialized task list for the system is developed. After MSDH's approval of the list, the technical assistance contractor, in cooperation with the system, proceeds to execute the tasks. If the system is selected for comprehensive assistance, it can potentially receive the assistance throughout the year. In these instances, it is necessary to ensure that certain policies are implemented, management adjustments are made, and the technical assistance contractor follows the changes throughout the improvement process. Selected intermediate systems are usually identified as having one or two major issues that can be resolved in considerably less time.

The PEER Review program provides improved technical operations to the water supply staff through peerto-peer interaction. The voluntary program pairs selected water system operators with other water system operators to assist them in preparing for annual MSDH inspections. Similar to comprehensive and intermediate technical assistance, MSDH provides the technical assistance contractor a list of poorly performing systems having Capacity Assessment scores less than 3.0. The technical assistance contractor contacts those systems by letter to determine their interest in participating in the PEER Review Program. To ensure that the assistance will have the greatest impact, contact is made with the system's responsible officials as well as the certified operator. Additionally, the technical assistance contractor also advertises the benefits of the PEER Review Program at various trade shows and in publications throughout the year. A water system desiring a PEER Review makes contact with the contractor's personnel, who in turn, coordinate a meeting for all parties involved, including at a minimum the operators on the PEER Review team, the water system operator, and the responsible official(s). At that meeting, all components of the capacity assessment are performed, including an onsite inspection of the water system. Additionally, the PEER Review team also looks beyond the standard capacity assessment by reviewing other technical, managerial, and financial aspects not previously evaluated. The team approach to problem solving provides an additional boost in capacity assessment areas thereby providing increased operational efficiency, managerial stability, and financial solvency. Shortly after the review is completed, a report by the PEER Review team is generated outlining the issues raised at the meeting, including suggestions for possible improvements that could be made for the benefit of the water system and its users. Whereas the comprehensive and intermediate assistance emphasizes managerial and financial components, the PEER Review Program primarily emphasizes technical components while providing limited managerial and financial assistance.

The Board Management Training Program for Water System Officials assists newly elected water system board members in meeting the requirements of State law. State law requires all newly elected water system board members of private, non-profit water supplies and officials of municipal systems with a population of 10,000 and less, receive training in their duties and management of a public water supply. Mississippi State University Extension Service (MSU-ES) coordinates with the selected training partners, to provide training throughout the state to these public water system officials. Board officials are given training that outlines their duties in managing and overseeing the operation of a public water system and their

responsibilities under State law. This training allows the new board members to have the management skills necessary to effectively fulfill their duties. In SFY-2019, an online format had been developed so that board members may complete the required training online. This availability will further reduce the number of board members and managers who have not received the required training by allowing them to complete the training online. This online format has been especially important in the climate of the pandemic. Additionally, the MS Legislature recently modified the existing Board Management Training Law to require an additional 4 hours of updated and advanced training beyond the initial 8 hours of training. The Bureau sees this as very beneficial and appropriate as time has shown that many of the problems facing water system compliance stem from poor management and financial decisions.

The Hands-On Operator Training, conducted by MsRWA which is the contractor for this reporting period, provides small system operators specialized "hands-on" training and skills they need in order to better operate their water systems on a daily basis. Some operators, especially new ones, may not have all the needed hands-on skills in order to effectively operate a water system. The training sessions are held throughout the State and provide participants with experience in skills such as meter repair, chlorinator repair, fire hydrant maintenance, leak detection, etc. The operators' newly acquired skills could lead to potential cost savings to the water system since operators learn how to make repairs themselves rather than having to hire specialized help. Having the additional skills may in turn improve system performance and capacity.

The Asset Management Training program conducted by MsRWA provide all systems, but in particular small systems, the knowledge and understanding of what constitutes proper management of assets that the system has to provide safe and consistent drinking water to their customers on a day-to-day basis. The program presents the key elements of what constitutes an asset, its service level, critical asset identification, life cycle and funding of assets both from the rehabilitation and replacement standpoints. The program also helps systems understand budgeting/audits and setting the proper rates to support care of system assets. At the conclusion of the day-long trainings, attendees have created an initial framework for the management of their assets.

MSDH has noted significant improvements to the water systems following the implementation of the assistance programs.

Comprehensive and Intermediate Assistance:

In SFY 2018 Communities Unlimited, Inc. (CU) provided technical assistance to 7 public water systems and intermediate assistance to 7 public water systems for a total of fourteen (14) Comprehensive Reviews conducted. The following tables lists the systems receiving long-term comprehensive assistance and intermediate assistance in SFY 2018 and shows their previous and present Capacity Assessment Ratings in SFY-2017.

			2017	2018
	Systems Receiving		Overall	Overall
	Comprehensive Technical Assistance		Capacity	Capacity
			Assessment	Assessment
			Ratings	Ratings
1	Burleson Mobile Home Park (Lee County)	No Change	0.33	0.33

2	Delta Rains – The Highland (Tate County)	No Change	0.67	0.67
3	Plum Point (Panola County)	Improved	1.00	1.33
4	South Victoria (Marshall County)	Declined	1.67	1.33
5	South Hancock Elementary (Hancock Cty)	Merged	3.00	
6	St. Patrick High School (Harrison County)	Improved	1.00	2.5
7	The Oaks Utilities (Harrison County)	No Change	1.67	1.67

			2017	2018
	Systems Receiving Intermediate Technical Assistance		Capacity Assessment	Capacity Assessment
			Ratings	Ratings
1	City of Wiggins (Stone County)	Improved	4.67	5
2	Shivers Water Association (Simpson County)	No Change	5.00	5
3	Big Yeager (Sunflower County)	Improved	3.67	4
4	Town of Terry (Hinds County)	Improved	4.00	4.67
5	Village of Eden (Yazoo County)	Declined	4.33	4
6	Town of Mize (Smith County)	Improved	3.67	4
7	NE Jeff Davis Water Assn (Jeff Davis Cty)	Improved	4.67	5
8	Town of Mt. Olive (Covington County)	Declined	4	3.33
9	Town of Liberty (Amite County)	Declined	4	3.67
10	Old River Water Assn (Wilkinson County)	No Change	4.33	4.33

In reviewing the results, the assistance provided assisted 40% of the systems to improve their capacity assessment scores; some systems receiving assistance did regress or made no improvement but overall a marked improvement was evident through the use of this technical assistance.

In SFY 2019, Mississippi State University Extension Service (MSU-ES) provided technical assistance to 12 public water systems. The following table lists the systems receiving assistance in SFY 2018.

	Systems Receiving Comprehensive Technical Assistance		2018 Overall Capacity Assessment Ratings	2019 Overall Capacity Assessment Ratings
1	Town of Crenshaw (Panola County)	Improved	2.00	3.33
2	Town of Beulah (Bolivar County)	No Change*	2.00	2.00
3	Arkabutla W/A (Tate County)	Improved	2.0	2.33
4	Senatobia Lakes Estates (Tate County)	No Change	0.33	0.33
5	Hermanville Water Association (Clarborne Cty)	Improved	1.00	4.00
6	Twelve Oaks Water System (Lafayette County)	Improved	2.33	2.67
7	St. Patrick High School (Harrison County)	Improved	2.50	3.50
8	Bill's Trailer Park (Lamar County)	Dissolved**	0.67	
9	Arlington Water Association (Perry County)	Declined*	2.00	1.67
10	Arlington W/A – Hintonville (Perry County)	Declined*	2.00	1.67
11	MS State Penitentiary MNLN (Sunflower Cty)	Declined	1.50	0.50
12	Cascilla W/A (Tallahatchie County)	No Change	4.00	4.00

In reviewing the results, the assistance provided assisted 41% of the systems to improve their capacity assessment scores; some systems receiving assistance did regress or made no improvement, but overall a marked improvement was evident through the use of this technical assistance. Those noted with a "*" received the technical assistance later in the fiscal year after their inspection. In these cases, impact of technical assistance will not be evident until FY-2020. Those noted with "**" received technical assistance to aid the system into dissolving and no longer falling under the SDWA regulations.

In SFY 2020, MSU-ES provided technical assistance to 13 public water systems. The following table lists the systems receiving assistance in SFY 2020 and shows their previous and present Capacity Assessment Ratings; some systems have not been rated since the assistance has been provided and some additional assistance may be necessary after the new ratings are provided.

	2019	2020
Systems Receiving	Overall	Overall
Comprehensive Technical Assistance	Capacity	Capacity

			Assessment Ratings	Assessment Ratings
1	Hermanville Water Assoc. (Clarborne Cty)	Improved	1.00	4.00
2	Senatobia Lakes Estates (Tate County)	Unknown*	0.33	COV
3	Town of Lambert (Bolivar County)	Improved	3.67	4.00
4	Harmontown Water Assoc. (Lafayette County)	Improved	4.00	4.33
5	City of McComb (Pike County)	No Change	3.67	3.67
6	Apple Valley Trailer Park (Harrison County)	No Change	1.00	1.00
7	C & R Properties (Harrison County)	No Change**	1.33	1.33
8	Cedar Lake Apt. Water System (Harrison Cty)	Dissolved**	2.00	COV
9	Colonial Estates #3 (Jackson County)	Declined**	2.00	1.67
10	Country Living MHP (Harrison County)	Improved**	1.33	1.67
11	The Oaks Utilities (Harrison County)	Declined	1.67	1.33
12	Tuxachanie Estates #2 (Harrison County)	Improved	1.33	2.00
13	Country Haven MHP (DeSoto County)	Improved**	1.67	2.00

In reviewing the results, the assistance provided assisted 46% of the systems that improved their capacity assessment scores; some systems receiving assistance did regress or made no improvement but overall a marked improvement was evident through the use of this technical assistance. Those noted with a "*" are under a consent order with the Enforcement Section of the Bureau of Public Water Supply and are actively pursuing compliance improvement. Those systems marked with "**" are receiving assistance to aid them in dissolving their systems through the purchase of water from a neighboring public water system. Some have already achieved this goal while some are in transition to that end. Some of the system were unable to receive an assessment due to the complications of the pandemic.

It should be noted that some public water systems declined the no-cost available technical assistance at their discretion. Systems choosing to decline the assistance may have made that decision based on their private, for-profit status or because the officials managing the system just did not want the state assistance.

Board Management Training Program for Water System Officials:

In SFY-2018, Mississippi State University Extension Service successfully administrated 20 sessions around the state and trained 544 board members and managers, which represented 275 public water supplies. Based on data generated after the end of the 2018 contract year, there were 4,649 active public water system board members in Mississippi; of this number, 453 or approximately 9.7% had not yet participated in a required Board Management Training session.

In SFY-2019, Mississippi State University Extension Service successfully administrated 13 training sessions around the state in which 239 board members and managers were trained; this represented 157 public water supplies. Based on data generated after the end of the 2019 contract year there are 4,649 active public water system board members in Mississippi; of this number 293 or approximately 6.3% had not yet participated in a required Board Management Training session.

In SFY-2020, Mississippi State University Extension Service successfully administrated 9 training sessions around the state in which 218 board members and managers were trained; this represented 147 public water supplies. Based on data generated after the end of the 2020 contract year there are 11,379 active public water system board members in Mississippi; of this number 293 or approximately 2.21% have not yet participated in a required Board Management Training session.

With the advent of the online training option, we anticipate that those remaining board members will be able to access the training they need.

As seen by the data for each year, the number of board members and managers who have not received the required training has declined each year. Even though there is no standard measurement on how the Board Management Training Program is working, having system officials knowledgeable of the laws, regulations and requirements of how a system should be managed helps the overall operation of the public water supply program. With the recent changes to the Board Management Training Law, the Department will be able ensure that the state public water supplies receive up to date information regarding law changes that will have impacts into the proper management of their public water supplies.

PEER Review Assistance:

Since the inception of the Peer review program in 2002, two hundred eighty-three (283) PEER Reviews have been conducted in the State through the end of the SFY 2020 reporting period.

In SFY-2018 fourteen (14) reviews were conducted to assist existing systems to improve the operation of their systems.

In SFY-2019 fourteen (14) reviews were conducted to assist existing systems to improve the operation of their systems.

In SFY 2020 ten (10) reviews were conducted to assist existing systems to improve the operation of their systems. The ongoing pandemic prevented the minimum of twelve (12) PEER Reviews from occurring.

The contractor for this program provides both monthly and quarterly reports of their activities including specific redacted reports of the individual PEER Reviews to our department. Contractors report that on average all the systems which have participated in this program have so far received improvements in their Post Review Average Rating.

Hands-On Operator Training:

From SFY 2018 to SFY20, MsRWA was able to provide 30 Hands-On Operator Training session to 774 attendees representing 475 unique public water systems. Through the class, 619 certified operators were able to receive valuable class instruction that provided continuing education units necessary to maintain

their certifications. The classes were also able to provide instruction to other public water system personnel in attendance.

Asset Management:

From SFY 2018 to SFY20, MsRWA was able to provide 6 total training courses providing instruction to 188 attendees representing 97 different public water systems. As asset management represents the overall management of a public water system, officials of those systems play a key role in ensuring infrastructure is properly operated and maintained. It should be noted only half of the attendees were certified operators, thus indicating officials (managers and board members) of PWSs feel good asset management is important to system sustainability and resiliency. Moving forward, asset management will be a key metric in the state's Capacity Development Program and strategy.

General Conclusions:

MSDH has found that the majority of public water systems are making efforts to improve even though the Capacity Development Program for existing systems is not mandatory. There are no specific penalties for a water system refusing assistance (which does occasionally occur) or failing to improve/maintain their Capacity Assessment Rating, however, such actions do have inherent consequences. The annual capacity assessment results for all systems are publicized on the MSDH website. Similar to the way the Consumer Confidence Report (CCR) is perceived, a primary goal of the program is for the public, not just the public water systems, to take an active role in assuring the quality of the State's water supply. The general public desires that their utilities be in compliance with laws and regulations, be viable for the future, and provide the best quality water at a reasonable cost.

Additional indirect consequences of failing to take action to improve Capacity Assessment Ratings include: 1) "losing" to neighboring water systems - many neighboring water systems view the capacity rating as a competition as to see who has the "best" water system; and 2) receiving lower priority when seeking certain government funding. Regarding funding priority, the State's DWSRF Loan Program contains priority ranking incentives related to Capacity Assessment Ratings, and other government agencies such as the Mississippi Developmental Authority's Community Development Block Grant (CDBG) Program have included a portion of the Capacity Assessment Ratings to evaluate applicants for funding. Additionally, the DWSRF requires that when reviewing facilities plans (with less than a perfect score) the potential loan recipients must address why points were missed. This rating competition between water systems and the fact that the ratings are used by funding agencies in their evaluation process encourages public water system to want to make themselves more viable. This desire to be viable ultimately translates into a benefit both to the customers and the general public by having better maintained and safer public water supplies.

RESULTS

The efficacy of Mississippi's Capacity Development Program is best demonstrated by actual results. At the present time there are 1,179 active public water systems in the state; using the Enforcement Targeting Tool List (ETT) from EPA:

The July 2018 report listed 7 systems in the state with violations; of these 2 systems had an ETT score greater than 11.

The July 2019 report listed 32 systems in the state with violations; of these 16 systems had an ETT score greater than 11.

The July 2020 report listed 22 systems in the state with violations; of these 5 systems had an ETT score greater than 11

Appendix B contains a complete listing of the Technical, Managerial, Financial, and Overall/Average Capacity Assessment Ratings (scores) of Mississippi's public water systems for SRF-2017, SFY-2018, SFY-2019 and SFY-2020. During the past reporting periods the Capacity Assessment Ratings on average have progressively increased; the "Yearly State Overall Averages" have increased from the SFY 2011 score of 4.09 as follows:

SFY 2012	4.20
SFY 2013	4.30
SFY 2014	4.41
SFY 2015	4.43
SFY 2016	4.43
SFY 2017	4.40
SFY 2018	4.38
SFY 2019	4.53
SFY 2020*	4.47

When reviewing the data, the following should be considered:

- Of the 1,179 public water system on the state's inventory, only approximately 1,100 had an assessment performed based on their system type. Transient, Non-Community Public Water Supplies are not required at this time to have Capacity Assessments performed; however, they are included in the Capacity Assessment listing of systems in Appendix B and are accounted for in the total 1179 active public water supplies operating within the state. They are listed in Appendix B as "N/A" and will not receive a rating.
- Consolidated, dissolved, or merged systems are indicated with the "CON" or "DIS" they were consolidated with other existing water supplies or are no longer in service at all.
- Newly created water supplies are identified by "NS".
- Non-Transient, Non-Community Public Water Supplies do not have a financial rating performed and are designated in Appendix B as "N/A."
- With the complications and logistics surrounding the ongoing pandemic, for SFY 2020 the Bureau was unable to perform capacity assessments for 354 public water systems. While this was not ideal, it is allowable under the federal regulations.

PUBLIC INVOLVEMENT

A primary goal of the Capacity Development Program is for the public, not just the public water systems, to take an active role in assuring the quality of the State's water supply. Customers of public water systems which have received a high rating are encouraged to contact their water system officials to congratulate them for doing an excellent job of operating and managing their water system. Likewise, customers of public water systems which have received a low rating are strongly encouraged to contact their water system officials and request a copy of the system's most recent Capacity Assessment Form. That form will quickly identify the areas where the water system needs improvement. A lower rating could indicate that the system is more likely to be non-viable and thus unable to protect public health by complying with all SDWA requirements. Customers of such systems are also strongly encouraged to get involved with their water system to ensure that any needed improvements are completed.

FUTURE

With the advent of some changes to various federal requirements associated with America's Water Infrastructure Act (AWIA) including the overall National Goal of a 25% reduction of systems with health-based violations, we will most likely see some systems having difficulty in meeting compliance requirements of EPA regulations such as the Ground Water and Stage 2 Disinfection By-Products Rules; when new SDWA rules or revisions are issued such as the Revised Lead and Copper Rule (scheduled for implementation in the near future) there is a period of time where systems adjust to the new or revised regulations. During those periods of time, compliance as well as their capacity assessment scores could suffer somewhat. When specific concerns of regulations are raised, the Bureau is proactive in addressing system needs. These needs are addressed through new contractual assistance to individual systems or creating new training opportunities through the operator certification program by way of our training partners. It is MSDH's intention to provide assistance to ensure that non-compliance is kept to a minimum. MSDH has discovered that it is easier and less costly to help systems maintain compliance by providing targeted technical assistance than by attempting to bring troubled systems back into compliance. We believe that assistance of this type routinely leads to better overall compliance rates, and higher water system capacity assessment scores.

Based on information from various sources including recent congressional legislation, it appears that the water supply concepts of asset management and sustainable infrastructure will be a major part of future needs and requirements of water systems. Additional funding provided to the DWSRF program will allow for more specialized assistance in the previously mentioned areas of asset management planning or sustainable infrastructure to the water systems in the State. Furthermore, we believe the Board Management Training of officials of water systems of 10,000 population and less is having a positive impact on capacity assessment scores. Recent Mississippi legislative action will help ensure that board official stay current on new trends and regulations that affect the management and operation of the public water system that they oversee. In the current economic climate, water systems are "doing their best" with less financial and operational resources and hopefully as economic conditions improve, many water systems may make significant infrastructure improvements that may be long overdue. As the concept of Asset Management (AM) has a renewed emphasis with the passage of AWIA, the Bureau will use the Capacity Assessment program as a prime strategy for encouraging its practice. While originally planned during state fiscal year 2021, the Bureau has had to reassess integrating this key sustainable element into its current capacity development program due to the complications associated with the current pandemic. To give systems further opportunity to prepare, the program has delayed the additional questions adding asset management to the current structure of the management portion of the assessment for one year. This was done to ensure that systems had ample opportunities to prepare their own plans by utilizing the free asset management training offered through a contract by Mississippi Rural Water Association. Beginning fiscal year 2022, the program will pair asset management with questions concerning long-range planning. This strategy combined with the Bureau's current emphasis on the aforementioned AM training contract will be the primary method to push the concept of asset management to the state's public water systems. Additionally, recent national grants awarded by the EPA to National Rural Water Association (NRWA) and Rural Capacity Assistance Partners (RCAP) will filter down to their local representatives. In planning meetings, the Bureau has asked that asset management have major emphasis in the technical assistance/training agendas of their portion of the grants. Furthermore, the program also hopes to add water audits in the scope of future assessment beginning fiscal year 2022.

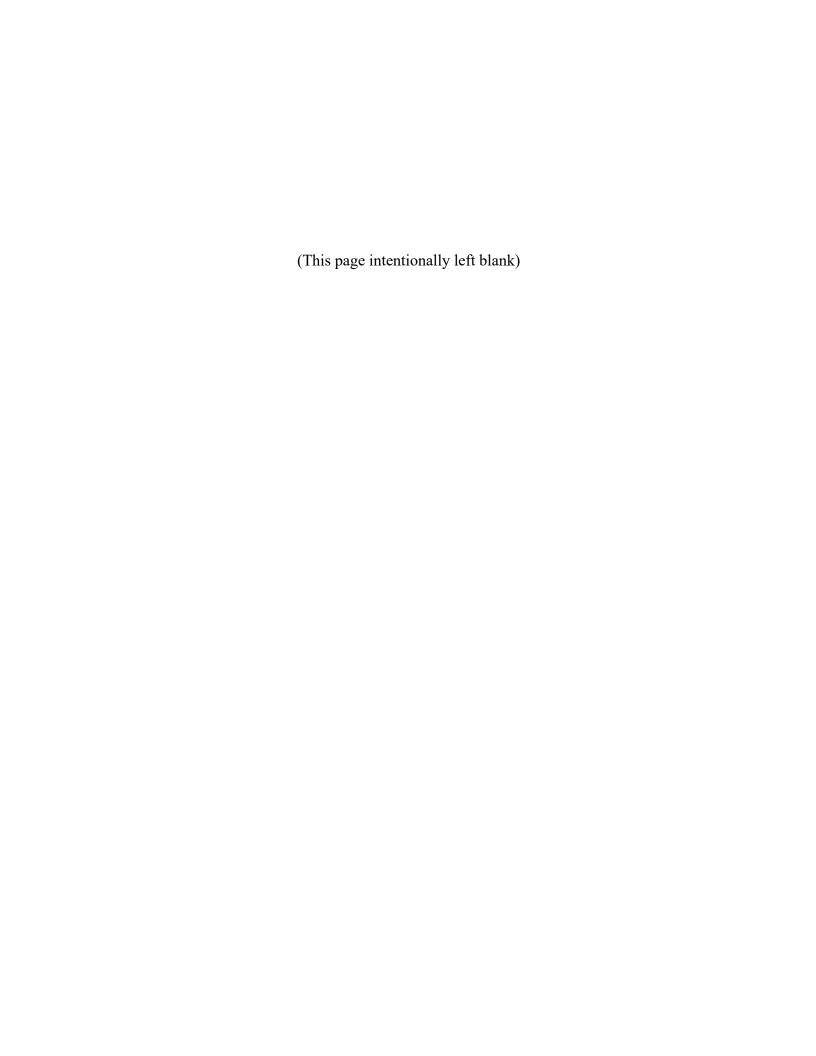

SUMMARY

Through the passage of proper legislation, the strict enforcement of existing laws and regulations, and the implementation of sound capacity assessment and technical assistance procedures, Mississippi continues a Capacity Development Program that has resulted in higher levels of technical, managerial, and financial capacity of new and existing public water systems throughout the State. The program also provides an additional benefit to the public in the form of better utilization of assistance resources and funding. Additionally, as a measure of success, other states in the country are modeling at some level their Capacity Assessment programs similar to that of Mississippi. That, of course, is a testament to the effectiveness of Mississippi's program. Although no major changes have been made in recent years, the annual evaluation process, along with the Advisory Committee review and public involvement, help to assure that any needed changes are identified and implemented in a timely manner to evolve the program to meet the needs of the state and the changing regulatory environment.

If there are questions regarding the information presented in this report, or if you have recommendations for improving the Public Water System Capacity Development Program, please contact:

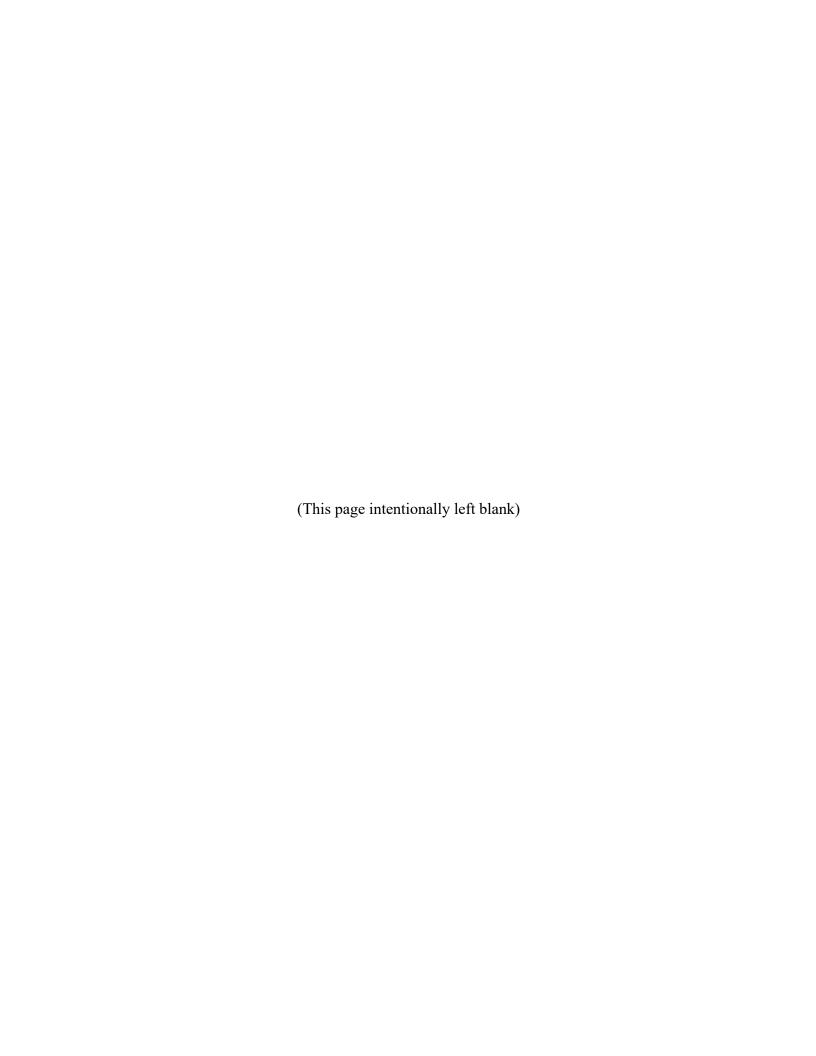

William F. Moody, P.E., BCEE, Director Bureau of Public Water Supply P. O. Box 1700 Jackson, MS 39215-1700

Financial Capacity Assessment	Point Scale	Point Award
[F1] Has the water system raised water rates in the past 5 years? [YN] (NOTE: Point may be awarded if the water system provides acceptable financial documentation clearly showing that a rate increase is not needed, i.e. revenue has consistently exceeded expenditures by at least 10%, etc.)	Y - 1pt. N - 0pt.	
[F2] Does the water system have an officially adopted policy requiring that water rates be routinely reviewed and adjusted as appropriate and was this policy available for review during the survey? [Y N]	Y - lpt. N - 0pt.	
[F3] Does the water system have an officially adopted cut-off policy for customers who do not pay their water bills, was a copy of this policy available for review by the regional engineer, and do system records (cut-off lists, etc.) clearly show that the water system effectively implements this cut-off policy? [Y N]	Y - 1pt. N - 0pt.	
[F4] Was a copy of the water system's officially adopted annual budget available for review by the regional engineer and does the water system's financial accounting system clearly and accurately track the expenditure and receipt of funds? [Y N]	Y - lpt. N - 0pt.	
[F5 - Municipal Systems] 1) Was a copy of the latest audit report available for review at the time of the survey? [Y N] 2) Does this audit report clearly show that water and sewer fund account(s) are maintained separately from all other municipal accounts? [Y N] (NOTE: Yes answer to all questions required to receive point.)	All Y - 1 pt. Else - 0 pt.	
[F5 - Rural Systems] 1) Was the latest financial report / audit report available for review? [Y N] 2) Does the latest financial report show that receipts exceeded expenditures? [Y N] (NOTE: Yes answer to both questions required to receive point)	All Y - 1 pt. Else - 0 pt.	
FINANCIAL CAPACITY RATING = [] (Total Points)		

Standard Form

Mississippi State Department of Health Bureau of Public Water Supply Capacity Development Rating Form Assessment Criteria

01 July 2019 - 30 June 2020

Technical Capacity

- T1 Does the water system have any significant deficiencies?
- T2 (1) Was the water treatment process functioning properly? Corrosion control plants: within 0.5 of target pH (approximately 8.4, Langlier Index, or 7.2-7.8 if adding phosphate for corrosion AND minimum phosphate residual of 0.5 mg/L as P or 1.5 mg/L as PO4 (most test kits)), Iron removal plants: finished water Fe < 0.3 mg/l, Chlorine: Adequate at plant to provide residual throughout system, spot checked on system, Systems adjusting Fluoride: 0.7 1.3 mg/l with optimum dose at 0.7 mg/l.
- T2 (2) Was needed water system equipment in place and functioning properly at the time of survey?

 Adequate security: locked fence around wells/treatment plant/tank (6' or 5' + barbed wire at top), locked hatches on water storage tanks (operator verifies), Security Vulnerability Self-Assessment and Emergency Response Plan, both updated annually. Required equipment in place (i.e., phosphate and/or fluoride feeders on all wells if required), major components sized correctly if affects water quality or quantity, major components working at time of inspection unless provisions for repairs made. Must be noted on inspection report.
- T2 (3) Were records available to the regional engineer clearly showing that all water storage tanks have been inspected and cleaned or painted (if needed) within the past 5 years? Maintenance and painting contracts, tank inspection reports, operator can inspect own tank if he/she writes a report and/or takes pictures, painted if needed. This can include tanks that are a part of the treatment process including clearwells.
- T3 (1) Was the certified waterworks operator or his/her authorized representative present for survey?

 Operator or representative must be present unless emergency; operator of record shouldn't miss two in a row.
- **T3 (2)** Was the operations record up to date and properly maintained? Operations record: Cl2 recorded as required, pH, Fe, Fluoride, and phosphate where applicable. Did operations record indicate the minimum required operator presence was performed based on system classification?
- **T3 (3)** Was the water system properly maintained at the time of survey? Grass cut, packing not leaking excessively, plant presentable, etc.
- T3 (4) Did the operator/system personnel satisfactorily demonstrate to the regional engineer that he/she could fully perform all water quality tests required to properly operate this water system? Must have appropriate test kits, fresh reagents, and able to perform tests (where applicable: chlorine, pH, iron, fluoride, phosphate). Regional engineer may perform tests to verify operator's results. Chlorine test must be performed by operator at all inspections.
- **T4 (1)** Does water system routinely track water loss and were acceptable records available for review? Requires metered connections and master meter or annual pump test with run time. Must show calculating water loss at least quarterly.
- **T4 (2)** Is the water system overloaded? Cannot exceed MSDH design capacity, consecutive systems overloaded if supplier overloaded or based on hydraulic calculations or pressure recording.

Standard Form

- T4 (3) Was there any indication that the water system is/has been experiencing low pressure in any part(s) of the distribution system? Documented by hydraulics or pressure recording, or verified by operator. Must be documented on inspection report
- **T4 (4)** Are well pumping tests performed routinely? Must have pump tests at least every two years on all wells that are greater than three (3) years old, OR pump tests every year on wells at systems with design capacity exceeding 80%.
- **T5 (1)** Does the water system have the ability to provide water during power outages? Credit given for generators, can give credit for emergency tie-ins w/ system w/ generator if hydraulics work, credit given for right angle drive if motor attached during survey, may be required to operate during inspection. Credit given for generator on trailer if quick-connect, systems with elevated storage may share generator on trailer, must have prior agreement. Service logs may be checked at time of survey.
- T5 (2) Does the water system have a usable backup source of water?

Managerial Capacity

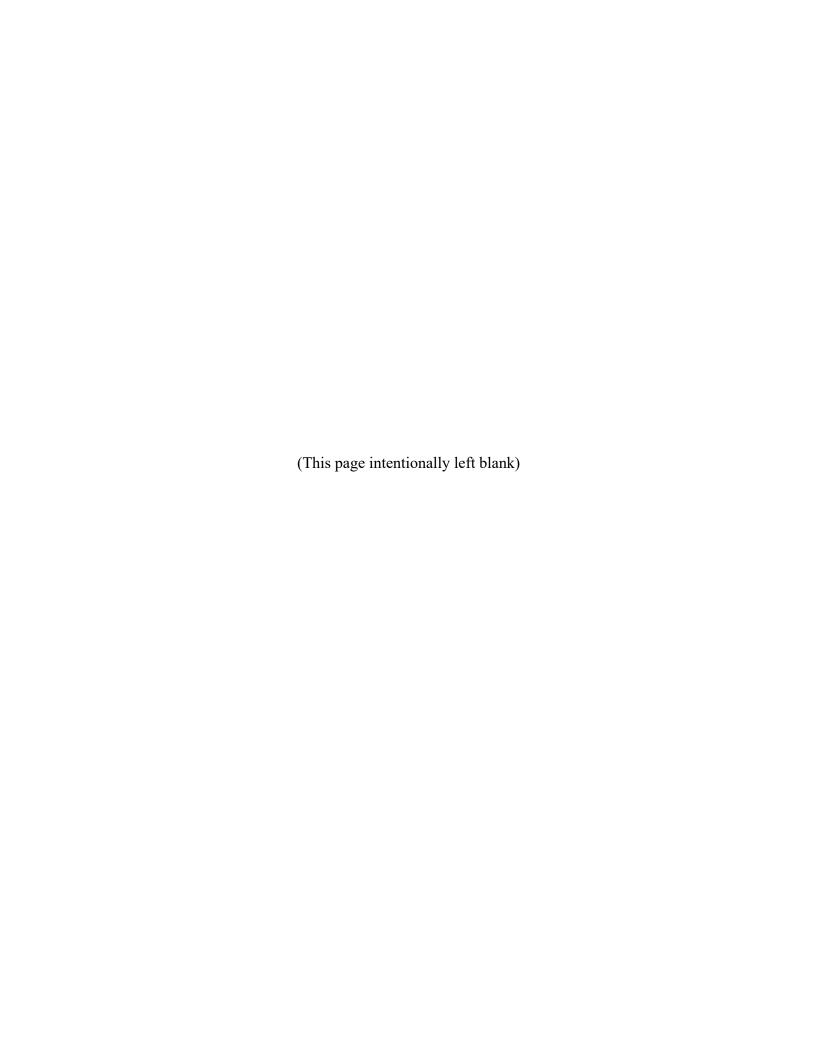

- Were all SDWA required records maintained in logical and orderly manner and available for review? In one location, sample results, MSDH correspondence, copy of CCR report, etc.
- M2 (1) Have acceptable written policies and procedures for operating this water system been formally adopted and available for review? Must have water users agreement (connection fees, late charges, deposits, wastewater requirements) and subdivision/line extension policy (written procedure requiring developer/system obtain MSDH approval before construction begins) and either By-laws or Job Description for Employees (employee handbook), plus at least two of the following: Emergency or contingency plan (chain of command, phone numbers, etc.), Flushing program (flushing schedule w/ records), Fire hydrant policy (maintenance schedule, flow tests, agreement w/ fire dept.), Updated distribution map (can be updated by operator), or SARA Tier II (report of hazardous chemicals, quantity, location provided to local and state fire, law and EOC's).
- M2 (2) Have all Board Members (in office more than 12 months) completed Board Member Training? Must have certificate (or copy) available for review. This does not apply to Municipalities with population over 10,000.
- **M2 (3)** Does Board meet monthly and were minutes of Board meetings available for review? Allow quarterly meetings with full time manager. Manager must be appointed by the board and documentation of appointment provided.
- M3 Has the water system had any SDWA violations since the last Capacity Assessment? System and Regional Engineer's records
- M4 Has the water system developed a long range improvement plan and was this plan available for review? Hydraulic analysis, engineering report, completed State Needs Survey Form or list of goals prepared by operator and adopted by board, can give credit for major improvement project within past 5 years. Plan in use should indicate progress towards improvements. Water systems need to provide proof of annual review by the governing body of the water system.
- **M5(1)** Does the water system have an effective cross connection program in compliance with MSDH regulations? Shall include the following: Cross connection policy, records of backflow preventers installed on the system, current test results for each backflow preventer on system.

Standard Form

M5(2) Was a copy of the MSDH approved bacti sample site plan and lead and copper sample site plan available for review and bacti results show site plan is followed? Copy of sampling site plans available and bacti results show plan is being followed.

Financial Capacity

- F1 Has the water system raised water rates in the past 5 years? Credit also allowed if revenue exceeds expenditures (excluding out of pocket for major improvements and depreciation) by 10% for past five years.
- F2 Does the water system have an official policy requiring rates routinely reviewed and adjusted if necessary? Must be in minutes showing adopted
- **F3 Is the water system following an official cut off policy?** Must be published (in minutes or on bills), must follow policy (cut off customers who by policy should be cut off)
- Was a copy of system's adopted annual budget available for review and does financial accounting system clearly and accurately track receipts and expenditures? Must provide copy of budget and balance sheet (income statement) for review.
- F5 Was a copy of the latest audit report (Municipal) available for review? Were water and sewer fund accounts separate from other accounts? List of violators, copy in records, can accept CPA audit report
- 7 1) Was the latest financial report/audit report available for review? copy in records, can accept CPA audit report. 2) Does the latest report show that receipts exceed expenditures? Excluding out of pocket for major improvements

Management Capacity Assessment	Point Scale	Point Award
[M1] Were all SDWA required records maintained in a logical and orderly manner and available for review by the regional engineer during the survey? $[\underline{Y}, \underline{N}]$	Y - 1pt. N - 0pt.	
[M2] Have acceptable written policies and procedures for operating this water system been formally adopted and were these policies and procedures available for review during the survey? $[\underline{Y}, \underline{N}]$	Y - lpt. N - 0pt.	
[M3] Has the water system had any SDWA violations since the last Capacity Assessment? [Y N]	N - lpt. Y - 0pt.	
[M4] Has the water system developed a preventive maintenance schedule and was a copy of this schedule available for review during survey? $[\underline{Y}, \underline{N}]$	Y - lpt. N - 0pt.	
[M5] 1) Does the water system have an effective cross connection control program in compliance with MSDH regulations? [Y N] 2) Was a copy of the MSDH approved bacti sample site plan and lead and copper sample site plan available for review and do bacti results clearly show this approved plan is being used for all bacti monitoring? [Y N]	All Y - 1 pt. Else - 0 pt.	
MANAGEMENT CAPACITY RATING = [] (Total Points)	•

Mississippi State Department of Health Bureau of Public Water Supply Capacity Development Rating Form Assessment Criteria

01 July 2018 - 30 June 2019

Technical Capacity

- T1 Does the water system have any significant deficiencies?
- T2 (1) Was the water treatment process functioning properly? Corrosion control plants: within 0.5 of target pH (approximately 8.4, Langlier Index, or 7.2-7.8 if adding phosphate for corrosion AND minimum phosphate residual of 0.5 mg/L as P or 1.5 mg/L as PO4 (most test kits)), Iron removal plants: finished water Fe < 0.3 mg/l, Chlorine: Adequate at plant to provide residual throughout system, spot checked on system, Systems adjusting Fluoride: 0.7 1.3 mg/l with optimum dose at 0.7 mg/l.
- T2 (2) Was needed water system equipment in place and functioning properly at the time of survey?

 Adequate security: locked fence around wells/treatment plant/tank (6' or 5' + barbed wire at top), locked hatches on water storage tanks (operator verifies), Security Vulnerability Self-Assessment and Emergency Response Plan, both updated annually. Required equipment in place (i.e., phosphate and/or fluoride feeders on all wells if required), major components sized correctly if affects water quality or quantity, major components working at time of inspection unless provisions for repairs made. Must be noted on inspection report.
- T2 (3) Were records available to the regional engineer clearly showing that all water storage tanks have been inspected and cleaned or painted (if needed) within the past 5 years? Maintenance and painting contracts, tank inspection reports, operator can inspect own tank if he/she writes a report and/or takes pictures, painted if needed. This can include tanks that are a part of the treatment process including clearwells.
- T3 (1) Was the certified waterworks operator or his/her authorized representative present for survey?

 Operator or representative must be present unless emergency; operator of record shouldn't miss two in a row.
- **T3 (2)** Was operations record up to date and properly maintained? Operations record: Cl2 recorded as required, pH, Fe, Fluoride, and phosphate where applicable. Did record indicate the minimum required operator presence was performed based on system classification.
- **T3 (3)** Was the water system properly maintained at the time of survey? Grass cut, packing not leaking excessively, plant presentable, etc.
- T3 (4) Did the operator/system personnel satisfactorily demonstrate to the regional engineer that he/she could fully perform all water quality tests required to properly operate this water system? Must have appropriate test kits, fresh reagents, and able to perform tests (where applicable: chlorine, pH, iron, fluoride, phosphate). Regional engineer may perform tests to verify operator's results. Chlorine test must be performed by operator at all inspections.
- T4 (1) Does water system routinely track water production and were acceptable records available for review? Requires master meter or annual pump test with run time. Must show calculating water production at least quarterly.
- **T4 (2)** Is the water system overloaded? Cannot exceed MSDH design capacity, consecutive systems overloaded if supplier overloaded or based on hydraulic calculations or pressure recording.

- T4 (3) Was there any indication that the water system is/has been experiencing low pressure in any part(s) of the distribution system? Documented by hydraulics or pressure recording, or verified by operator. Must be documented on inspection report.
- **T4 (4)** Are well pumping tests performed routinely? Must have pump tests at least every two years on all wells that are greater than three (3) years old, OR pump tests every year on wells at systems with design capacity exceeding 80%.
- **T5 (1)** Does the water system have the ability to provide water during power outages? Credit given for generators, can give credit for emergency tie-ins w/ system w/ generator if hydraulics work, credit given for right angle drive if motor attached during survey, may be required to operate during inspection. Credit given for generator on trailer if quick-connect, systems with elevated storage may share generator on trailer, must have prior agreement. Credit not given for renting generator w/o contract. SYSTEM MAY PROVIDE BOTTLED WATER IF INCLUDED AS PART OF A PUBLISHED EMERGENCY PLAN. Service logs may be checked at time of survey.
- T5 (2) Does the water system have a usable backup source of water?

Managerial Capacity

- M1 Were all SDWA required records maintained in logical and orderly manner and available for review? In one location, sample results, MSDH correspondence, copy of CCR report, etc.
- Have acceptable written policies and procedures for operating this water system been formally adopted and available for review? Must have Job Description for Employees associated with potable water system (employee handbook) and Emergency or Contingency plan (chain of command, phone numbers, etc.), plus at least one of the following: Construction policy (written procedure requiring MSDH approval before construction begins), Flushing program (flushing schedule w/records), Fire hydrant policy (maintenance schedule, flow tests, agreement w/fire dept.), Updated distribution map (can be updated by operator), or SARA Tier II (report of hazardous chemicals, quantity, location provided to local and state fire, law and EOC's).
- M3 Has the water system had any SDWA violations since the last Capacity Assessment? System and Regional Engineer's records
- Has the water system developed a preventative maintenance schedule and was this plan available for review? Maintenance schedule for: wells (including annual pump tests), service pumps, tank inspections, with recommendations and corrective action taken. Documentation must be available for review.
- **M5(1)** Does the water system have an effective cross connection program in compliance with MSDH regulations? Shall include the following: Cross connection policy, records of backflow preventers installed on the system, current test results for each backflow preventer on system.
- M5(2) Was a copy of the MSDH approved bacti sample site plan and lead and copper sample site plan available for review and bacti results show site plan is followed? Copy of sampling site plans available and bacti results show plan is being followed.

APPENDIX B

State Fiscal Year 2020 Capacity Assessment Scores
